Business case

Air France - KLM and Geopost subsidiary

Sodexi is an international cargo transport operator on commercial flight. The subsidiary located at Charles de Gaulle airport is an expert of express freight with his fully automated sorting office.

«Our business entail transporting, clearing through customs and dispatching packages without delay. With more than 400 flights daily from departure to arrival, which represent more than 55 500 tones of express freight yearly.

Our activity works 24/7, for some managers working off-site it is sometimes difficult to assess the flow management instantly. Thanks to Business4Mobile, we now can easily **create dashboards** enabling managers, whether on-site or not, to access through their mobile phone connected to the Internet, to operation data. Those business applications map following company's processes : traceability, logistic and automatic clearance through customs as well s e-document exchanges in partnership with French customs.

Managers can then **smoothly track down in real time, handled air fret, errors and discrepancies and even forecast charge dispatch** based on the following day schedule.

Business4Mobile is definitively reporting solutions dedicated to mobile employees mainly looking at key performance indicators related to day-to-day activity.»
